## INTRODUCTION

Scrum is for sure the most popular Agile methodology of our times. But what is it about Scrum that makes it the number one framework for iterative software development? How did Scrum grow to be the most widely used Agile method, and what are the reasons for its success?

One possible answer is that Scrum is simple, straightforward, and easy to implement. While there are a number of other iterative and incremental development methodologies out there (eXtreme Programming, Crystal Clear, Agile Unified Process, etc), Scrum is on the simple side. Not only because of its inherent characteristics, but also because it has well documented use cases. In other words: in part, Scrum is successful simply because it's popular, but mainly the very good reason for Scrum's success, of course, is that it just works.

The reasons behind the increased performance of Scrum teams are manifold. For one, of course, Scrum is a mature framework of development and project management. With frequent iterations and continuous feedback, it helps make sure that the delivered end product suits customer needs. The ability to change requirements on the fly makes sure the project is not derailed.

Another element to be considered is the fact that Scrum offers a variety of certifications. Scrum Masters, Product Owners, developers, but also trainers and coaches can get certified. Demonstrated experience and, perhaps even more importantly, ongoing education definitely helps. This feedback and continued contact with Scrum practitioners enable the methodology itself to continue to evolve and gain maturity.

With ample credibility offered by both certifications and documented use cases, it's no wonder that Scrum was able to garner much attention and support. Companies aspiring to transition to an Agile methodology soon find that reliable and comprehensive information on the several Agile frameworks is difficult to come by.

## SCOPE AND PURPOSE OF THIS DOCUMENT

The purpose of this document is to inform all parties interested in the ScrumLearn® Master Certified (SLMC) course of the areas covered in the qualification. This document describes the Learning Objectives (LOs) that must be covered in a ScrumLearn® Master Certified (SLMC) course and that are tested by the examination. These Learning Objectives take the following into consideration:

- Every implementation of Scrum is different;
- Teams and organizations apply Scrum within their context, but the fundamental framework always remains the same.

## QUALIFICATION OBJECTIVES

Whether you're a manager, programmer, tester, analyst, product manager, or someone interested in working on or with a Scrum team, this course is suited for you. You will leave with solid knowledge of how and why Scrum works. When you have acquired the required knowledge from this course, you will be able to:

- Explain the drivers responsible for the emergence of Agile.
- Describe and recognize the essential values, roles, meetings, and artifacts that define the Scrum framework

- Specific Scrum practices that support the delivery of great products
- Ability to support the product owner keep the development initiative in shape
- Facilitate group decision making in the Scrum Team related events
- Encourage using empirical tools to inspect and adjust development
- Be in the better condition to pass the certification exam

## TARGET AUDIENCE

The ScrumLearn® Master Certified (SLMC) qualification is fit-for-purpose for whoever is interested in having a deep understanding of Scrum, and is beneficial to professional acting as any of the following ICT roles:

- Architect
- Business Analyst
- Designer
- Product Manager
- Program Manager
- Developer
- Project Manager
- Team Leader
- Tester

## CERTIFICATION REQUIREMENTS

You will receive the required certification from iCONS on successful completion of the ScrumLearn® Master Certified (SLMC) exam.

## EXAM DETAILS

The characteristics of the ScrumLearn® Master Certified (SLMC) exam are:

Exam Format:

- Closed-book format
- Paper/Web-Based
- Participants may use scratch paper

Questions:

- 60 multiple choice questions

Passing Score:

- 60%

Exam Duration:

- 60 minutes
- 15 minutes extra time for non-native English speakers.

## LEARNING OUTCOMES

A classification widely used when designing assessments for certification and education is the Bloom’s Taxonomy of Educational Objectives. This classifies learning objectives into six ascending learning levels, each defining a higher degree of competencies and skills. (Bloom et al, 1956, Taxonomy of Educational Objectives).

This structured approach helps to ensure:

- A clear delineation in learning level content between different qualification levels
- Learning outcomes are documented consistently across different areas of the guidance
- Exam questions and papers are consistent and are created to a similar level of difficulty.
- The Scrum Master Certified qualification examines learning outcomes at levels 1 (knowledge) and 2 (comprehension).

### ScrumLearn® Master Certified (SLMC) LEARNING OUTCOMES

| ScrumLearn Master Certified (SLMC) LEARNING OUTCOMES |  |  |  |   |
|--|--|--|--|---|
|  | 1<br>Knowledge   | 2<br>Comprehension   | 3<br>Application                                   | 4<br>Analysis   |
| Generic Definition from Learning Outcomes            | Know key facts, terms and concepts from the manual/ guidance   | Understand key concepts from the manual/ guidance  | Be able to apply key concepts for a given scenario | Be able to analyze and distinguish between appropriate and inappropriate use of the method/ guidance for a given scenario situation |
| Qualification Learning Outcomes                      | Know facts, including terms, concepts, principles, tools and techniques from the Scrum Master curriculum | Understand the concepts, principles, and dimensions of Scrum and can explain how these are applied |  |   |

## **SYLLABUS AREAS**

The following syllabus areas are identified.

| SYLLABUS AREA CODE | SYLLABUS AREA TITLE  |
|--------------------|----------------------|
| IN                 | Course Introduction  |
| AO                 | Agile Overview       |
| SO                 | Scrum Overview       |
| SR                 | Scrum Roles          |
| SA                 | Scrum Artifacts      |
| SE                 | Scrum Events         |
| TT                 | Tools and Techniques |
| SI                 | Scrum Implementation |

In the following section are provided details on the topics covered in the different lessons of the course, including the corresponding bibliographic references. This course has been mainly based on the Scrum representation provided by Ken Schwaber and Jeff Sutherland In their book “The Scrum Guide™ - The Definitive Guide to Scrum: The Rules of the Game”. Additional sources have also been used, and are specified in the section “Referenced bibliography and suggested readings”.

## **SYLLABUS**

### **COURSE INTRODUCTION (IN)**

This module lets learners know about the ScrumLearn® Master Certified (SLMC) course, such as a brief overview, certification, and training agenda.

### **AGILE OVERVIEW (AO)**

This module is about understanding the origins of the Agile approach and how it turned upside-down the traditional approach to product development and project management.

| AREA CODE | SECTION | SUBSECTION | TOPIC                        | BIBL. REF. |
|-----------|---------|------------|------------------------------|------------|
| AO        | 01      | 01         | What is Agile ?              | 2), 12)    |
|           |         | 02         | Agile is now mainstream      |            |
|           |         | 03         | Agile is a mindset           |            |
|           |         | 04         | Where does Agile come from ? |            |
|           |         | 05         | Agile Manifesto              |            |

| AREA CODE | SECTION | SUBSECTION | TOPIC  | BIBL. REF. |
|-----------|---------|------------|--|------------|
|           |         | 06         | Waterfall vs Agile                               |            |
|           |         | 07         | Common practices of Agile teams                  | 2)         |
|           |         | 08         | A few well-known Agile techniques and approaches |            |
|           |         | 09         | Kanban   | 16)        |
|           |         | 10         | The BUILD-MEASURE-LEARN feedback loop            | 9)         |

### SCRUM OVERVIEW (SO)

This module is about introducing the Scrum approach, also in relation to Agile, and giving an overall vision of how Scrum is structured in terms of roles involved, project phases, and activities.

| AREA CODE | SECTION | SUBSECTION | TOPIC                         | BIBL. REF. |
|-----------|---------|------------|-------------------------------|------------|
| SO        | 01      | 01         | What is Scrum ?               | 1)         |
|           |         | 02         | Why Scrum ?                   |            |
|           |         | 03         | Scrum Genesis                 |            |
|           |         | 04         | Scrum within Agile            |            |
|           |         | 05         | Scrum Theory                  |            |
|           |         | 06         | Scrum Pillars                 |            |
|           |         | 07         | Scrum Values                  |            |
|           |         | 08         | Scrum Team                    |            |
|           |         | 09         | Scrum Artifacts               |            |
|           |         | 10         | Scrum Events                  |            |
|           |         | 11         | Scrum Applicability           |            |
|           |         | 12         | Scrum advantages and benefits |            |

### SCRUM ROLES (SR)

This module introduces the typical organization of a Scrum project, detailing the core and non-core Scrum roles and responsibilities.

| AREA CODE | SECTION | SUBSECTION | TOPIC                           | BIBL. REF. |
|-----------|---------|------------|---------------------------------|------------|
| SR        | 01      | 01         | The Scrum Team                  | 1)         |
|           |         | 02         | Scrum roles within a Scrum Team |            |
|           |         | 03         | The Product Owner               |            |

| AREA CODE | SECTION | SUBSECTION | TOPIC                           | BIBL. REF. |
|-----------|---------|------------|---------------------------------|------------|
|           |         | 04         | The Development Team            |            |
|           |         | 05         | The Scrum Master                |            |
|           |         | 06         | The Scrum Team                  |            |
|           |         | 07         | Scrum roles within a Scrum Team |            |

### **SCRUM ARTIFACTS (SA)**

This module introduces the documents and artifacts that are used in a Scrum product development initiative

| AREA CODE | SECTION | SUBSECTION | TOPIC               | BIBL. REF. |
|-----------|---------|------------|---------------------|------------|
| SA        | 01      | 01         | Scrum Artifacts     | 1)         |
|           |         | 02         | The Product Backlog |            |
|           |         | 03         | The Sprint Backlog  |            |
|           |         | 04         | The Increment       |            |

### **SCRUM EVENTS (SE)**

This module introduces the main meeting and prescribed occasion for exchanges that are used in a Scrum product development initiative

| AREA CODE | SECTION | SUBSECTION | TOPIC                    | BIBL. REF.   |
|-----------|---------|------------|--------------------------|--------------|
| SE        | 01      | 01         | Scrum Events             | 1)           |
|           |         | 02         | The Sprint               | 1), 4)       |
|           |         | 03         | The Sprint Planning      |              |
|           |         | 04         | The Daily Scrum          | 1), 17), 19) |
|           |         | 05         | The Sprint Review        | 1)           |
|           |         | 06         | The Sprint Retrospective | 1), 8), 11)  |

### **TOOLS AND TECHNIQUES (TT)**

This module introduces the most common tools, techniques, approaches and practices that support a Scrum product development initiative

| AREA CODE | SECTION | SUBSECTION | TOPIC              | BIBL. REF. |
|-----------|---------|------------|--------------------|------------|
| TT        | 01      | 01         | User Stories       | 7)         |
|           |         | 02         | User Story Mapping | 5)         |

| AREA CODE | SECTION | SUBSECTION | TOPIC                             | BIBL. REF. |
|-----------|---------|------------|-----------------------------------|------------|
|           |         | 03         | The Scrumboard                    | 7), 19)    |
|           |         | 04         | Monitoring Progress Towards Goals |            |
|           |         | 05         | The Team Velocity                 |            |
|           |         | 06         | Story Points and Agile Estimation |            |

### SCRUM IMPLEMENTATION (SI)

This module explains how Scrum can be actually introduced in an organization and also the most reliable models to scale Scrum to largest development initiatives

| AREA CODE | SECTION | SUBSECTION | TOPIC  | BIBL. REF.    |
|-----------|---------|------------|--|---------------|
| SI        | 01      | 01         | Adopting Scrum <ul style="list-style-type: none"> <li>• Culture</li> <li>• Principles</li> <li>• Storytelling</li> </ul>                         | 1), 20)       |
|           |         | 02         | The Scrum Journey  | 1), 21)       |
|           |         | 03         | Scaling Scrum <ul style="list-style-type: none"> <li>• Scrum@Scale</li> <li>• The Nexus Framework</li> <li>• Large-Scale Scrum (LeSS)</li> </ul> | 22), 23), 24) |
